

Matarleifar

Food waste Resztki jedzenia

Heimilin fá körfu og bréfpoka undir matarleifar úr eldhúsínu. Allar matarleifar, t.d. kjöt, fisk, bein, brauð, kex, sælgæti, grænmeti, ávexti og kaffikorg, skal setja í bréfpokann.

Ekki má setja plast- eða maíspoka í körfuna þar sem þeir brotna ekki niður.

Households will receive a basket and paper bags for food waste. All food scraps, e.g. meat, fish, bones, bread, biscuits, sweets, vegetables, fruits, and coffee grounds, must be placed in the paper bag.

Do not use plastic or corn starch bags for the basket as they do not decompose.

Do każdego gospodarstwa domowego dostarczone zostaną kosz i papierowe torby na resztki jedzenia. Papierowe torby przeznaczone są na wszystkie odpady żywnościowe, np. mięso, ryby, kości, pieczywo, ciastka, słodycze, warzywa, owoce oraz fusy z kawy.

Niedozwolone jest stosowanie toreb z tworzyw sztucznych lub ze skrobi kukurydzianej, gdyż nie ulegają one rozkładowi.

Karfán er hönnuð þannig að bréfpokinn liggar ekki upp við plastið í körfunni nema að litlu leyti. Þannig loftar um hann og hann helst þurr.

Það kemur ekki meiri lykt úr bréfpokannum en pokum þar sem matarleifum er hent með blönduðum úrgangi.

The basket is designed so that the paper bag does not lie against the plastic except to a small extent. Air flows around it which helps it stay dry.

The bag does not have a stronger smell than bags containing food and mixed waste.

Ekki setja of mikið í pokann og alls ekki upp fyrir punktalínu á pokanum.

Gott er að skilja vökva frá matarleifum. Ef matarleifarnar eru blautar má setja eldhúsbréf undir þær til að þurrka upp raka.

Do not put too much in the bag, and do not exceed the dotted line on the bag.

It is good to separate liquid from leftover food. If the food waste is wet, you can put kitchen towels underneath to dry up the moisture.

Ekki setja tvo poka saman í körfuna. Það eykur hættu á leka vegna þess að það takmarkar loftun.

Do not put two paper bags together in the basket. It increases the risk of leaks because it restricts ventilation.

Nie należy umieszczać dwóch worków w koszu, gdyż zwiększa to ryzyko wycieku.

Skiptu um poka eftir 2–3 daga jafnvel þótt hann sé ekki fullur.

Change the bag after 2–3 days even if it is not full.

Worek należy wymienić po 2–3 dniach, nawet jeśli nie jest pełny.

Lokaðu pokanum vel og settu hann í tunnuna undir matarleifar.

Close the bag tightly and put it in the bin under food waste.

Worek należy szczelnie zamknąć i włożyć do pojemnika na odpady żywnościowe.
